a Graduated from **Surabaya State University in 2024** with a major in **Informatics Management** with GPA of **3.72/4.00**. **+2 years** of professional experience in mobile application development on **Android using native** and **cross-platform frameworks**. Developed and published more than **2 Android apps on the (Play Store)** using **Flutter** from scratch. A clear understanding of **Android architecture** and **components**. **1 year** of experience in **React, React Native, and Flutter**, and I'm still learning. I'm passionate about developing mobile applications with the highest coding standards. I'm a hard worker and always pay attention to **quality** and **deadlines**.

EDUCATION

State University Surabaya | GPA 3.72/4.00

Informatic's Management

Sep 2020 - Jul 2024

EXPERIENCE

PT Maxxi Tani Teknologi Indonesia | Internship

Backend Engineer

October 2024 - March 2025

- Working as a Backend Engineer at PT Maxxi Tani Teknologi Indonesia since October 2024 to present in an Agile development environment with Sprint cycles.
- Handling two main sprint themes, namely dashboard-territory and dashboard-phase-2, using the Spring Boot framework.
- Responsible for developing new features and fixing bugs in each ongoing sprint.

PT GIFTLINE ASIA | Contract

Android Engineer

December 2025 - now

- Ongoing development of the Siboyo App (Existing Project) — an e-commerce platform for Surabaya MSMEs owned by the Surabaya City Government.
 - Google Play: <https://play.google.com/store/apps/details?id=com.giftline.siboyo>
 - Active Users: 1,000 users
- Implementation of the Deep Link Sharing feature for Products and Seller Stores, enabling easier product distribution and marketing across various external platforms.
- Implementation of the Dynamic Carousel/Banner feature, which was previously static, has become a dynamic feature driven by the backend through close collaboration with the backend team.
- Implementation of the Real-Time Chat feature with the Admin on the Mobile App side, connected to the Web Admin Dashboard.
- Implementation of the Package Delivery feature (similar to Gojek) to support package delivery to multiple destinations and payment validation via QRIS, as well as handling each validation across multiple screens.
- Implementation of Mobile Dashboard Features for Sellers and Partners within the Mobile App
 - Manage Orders Easily
 - Manage Chat in Real Time
 - Manage Products Easily
- Extensive image optimization fixes across the app to improve loading performance and reduce asset size.
- Implementation of an Android development workflow, automating the development environment process and integrating ChuckerFlutter to improve debugging and network inspection during development.
- Building a real-time chat system between customers and sellers (similar to WhatsApp) to support product inquiries and facilitate the checkout process, directing users to the Siboyo app to complete transactions.
- Revamping the gTips app to G-Logistik, redesigning and implementing over 20 screens and reusable UI components to improve scalability and maintainability.
 - Google Play: https://play.google.com/store/apps/details?id=com.gap_giftline.ecommerce.gTips
